JQuery

Java Script

$

document.getElementById("userId")

${"#userId"}

```
$.ajax({
        url:""
       data:{key:value}
       success:function(){}
```

UseCase Steps

Implement the backend validation

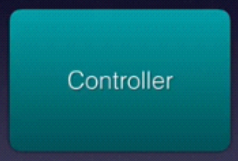
Controller → Service → DAO

Make the AJAX Call

Use JQuery

onChange

AJAX Call



Handle Response

AJAX AND JQuery

Responsive

JS Abstraction

```
$ajax(
    url:
    data:
    success:
```
